The MAdoorS Systems specializes in the design, manufacturing and installation of ballistic resistant roller shutters that are tested in official ballistic testing both in Türkiye and abroad, according to project requirements and various international ballistic standards. The Madoors company's Roller Shutters are tested and approved according to the highest ballistic levels in accordance with American standards (NIJ 010801 level IV), European (EN-1522 FB7, EN-1063 BR7) and NATO (STANAG-4569 Level 3).

The Madoors company's Roller Shutters are made of unique steel and or aluminum profiles that include ballistic armor steel inserts that prevent bullets penetration from every possible angle in accordance with European and other international standards such as EN1522 FB-7, while maintaining a highly aesthetic appearance and maximum clear opening.

The MAdoorS Systems ballistic rated Roller Shutters can be installed in openings in concrete walls or cement blocks (combined with a top-of-the-line ballistic rated light composite armor and or armor steel panels to ensure full ballistic protection for the walls in a case of ballistic attacks).

The MAdoorS Systems ballistic rated Roller Shutters can be integrated with protection from blast, ballistic and forced-entry combined attempts.
